DETAILED ACTION

This action is responsive to the amendment and RCE filed 9-15-2008 and 10-10-2008 respectively, which has been entered. Claims 1 and 4-10 are currently pending.

Continued Examination Under 37 CFR 1.114

1. The request filed on 10-10-2008 for a Request for Continued Examination (RCE) under 37 CFR 1.114 based on parent Application No. 10/809,797 is acceptable and a RCE has been established. An action on the RCE follows.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1 and 4-10 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 4-8 of U.S. Patent No. 7,147,382 to Suzuki et al. in view of Kawashima et al. (4,867,649). Suzuki et al. discloses a bearing

Art Unit: 3656

component having of hydrogen content of no more than 0.5 ppm, an austenite grain size number exceeding 10 and a facture stress value of at least 2650 MPa. Suzuki et al. do not disclose the bearing component is a compressor bearing component. Kawashima et al. disclose the compressor including a compressor component such as a swash plate supported by a needle bearing roller (25), incorporated into a compressor having a compressor body (28), a bearing component (21/25/41), a pulley mechanism (not labeled). Therefore, it would have been obvious to pone of ordinary skill in the art at the time of the invention to modify the bearing of Suzuki et al. so that it can be used on the compressor of Kawashima et al. in order to provide greater stability and wear resistance, increase fatigue life, increase anti crack strength and increase life at high temperature.

Regarding claims 5-10, Kawashima et al. disclose the claimed invention as in paragraph 3 above.
